

# RFeasyServ

**Adding power to your RF Network.**

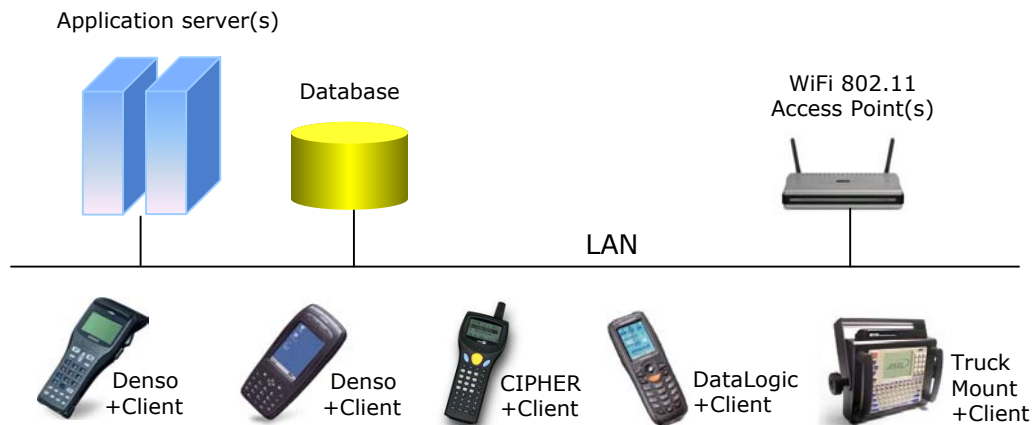

RFeasyServ from BancTec is a simple solution for creating powerful client/server applications over a standard 802.11b/g WiFi network. The RFeasyServ host component and mobile client manage the user screens and data flow between a mobile terminal and a host application. It can also be used as an easy replacement for the **PL-Server** narrow band solution.

The control has been designed to assist developers in creating powerful RF client-server applications quickly and easily without having to get bogged down in the RF communications. The control provides a simple set of methods and events for the developer to control everything on the HHT and get notification of an input. These include screen outputs, barcode & keyed input fields, RS232 I/O to peripherals, LED and buzzer control, form/frame management and flow control etc.

The control on the Server coupled with the Client on the mobile terminal takes care of all the low-level communications, packet compilation, flow control etc allowing the developer to concentrate on the application functionality.

The Client is available on a range of products from different manufacturers all connecting to the same RFeasyServ control and thus same Host Application. These include the **CIPHER LAB** 8000, 8300 **DATA LOGIC**™ Memor, Skorpio **DENSO** BHT300,500,600 , plus a number of CE.Net & XP devices including truck mount units, PDAs etc.

All Clients return identical information and have the same commands, which means it is possible to mix the mobile clients to suit your needs. e.g. handheld terminals for picking and goods in, Truck Mount units for bulk transfers and despatch, PDAs for managers etc all talking to the same server.

The RFeasyServ control is available as an Active X control and .Net component. These can be used in any application that supports these controls, Visual Studio (VS2005), Visual Basic (VB6), Visual C++, Excel, Access, FoxPro, Delphi.

For further information or a product CD please contact BancTec AutoID Sales on 01753 776762 or [autoid.sales@banctec.co.uk](mailto:autoid.sales@banctec.co.uk) The CD contains everything you need to trial the system on a BHT300 including the BHT300 Client, manuals, sample host source and RFeasyServ control.
